

• Light traffic electroforged grating

Allowable Loads Table

Bearing Bar			Span in inches													
			24	30	36	42	48	54								
3/4 X 1/8 (4)	42	U	355	227	158	116	89	70	<p>Note: The carrying capacity of a piece of grating subjected to a concentrated load over only a portion of its width is determined by the stiffness of both the bearing bars and the cross bars, and therefore differs with the type of grating used. To determine the carrying capacity of gratings to such loadings, the manufacturer's engineering should be consulted.</p> <p>Conversion Factors: For gratings with other than 1-3/16" bearing bar spacing, or for different design stresses, proportionate conversion factors apply. Refer to the Metal Bar Grating Engineering Design Manual for the development of such factors.</p> <p>Note: 1/4" is considered the maximum deflection consistent with pedestrian comfort, but can be exceeded for other loading conditions at the discretion of the engineer.</p>

U: Permissible uniform load (in kg/m²)
C: Permissible concentrated load (in kg/m²)

Du: Deflection with uniform load (mm)
Dc: Deflection with concentrated load (mm)

On a to other rack, consider a cant 1/4" greater than that required to support the indicated load.
NOTE: We invite you to consult us the feasibility of your project.
